

ABOUT ME

Full-stack Software Developer and Bachelor's in Computer Science from São Paulo State University (UNESP), passionate about leveraging modern technologies to build impactful digital solutions. I specialize in developing single-page web applications using React, Redux, and Next.js, as well as creating robust REST APIs with Node.js, C#, and Java. My experience in Agile environments and cross-functional teams has enabled me to consistently deliver high-quality, scalable software that meets client needs. For more details, visit my portfolio: otavioteixeira.com.

EDUCATION

São Paulo State University (UNESP) - São José do Rio Preto, Brazil

Bachelor's in Computer Science 02/2022 - 12/2025

- Specialized in Artificial Intelligence.
- GPA: B (equivalent to 8.05/10).

Rocketseat - São Paulo, Brazil

Full Stack Development Certification 05/2021 - 03/2022

- Developed full-stack applications with modern frameworks (React, Node.js).
- Focused on scalable architecture and best coding practices.
- GPA: A (equivalent to 10/10).

RESEARCH

Undergraduate Thesis (TCC) — UNESP

NLP & Machine Learning Researcher 12/2024 - 12/2025

- Title:** *Study and Comparison of Language Models for Fake News Detection in Portuguese.*
- Benchmarking Pipeline:** Engineered a robust evaluation framework in Python to compare 13+ embedding models for fake news detection, utilizing the FakeRecogna corpus (11k+ samples).
- Model Implementation:** Integrated and tested state-of-the-art LLMs (OpenAI text-embedding-3, SFR-Mistral, BERTimbau) against baselines (TF-IDF, Word2Vec) using Hugging Face and PyTorch.
- Performance Optimization:** Accelerated hyperparameter tuning for SVM and Random Forest classifiers using **RAPIDS cuML** on GPU, significantly reducing training time.
- Key Results:** Achieved a state-of-the-art **F1-Score of 98.32%** by combining OpenAI embeddings with optimized Logistic Regression, outperforming traditional methods.
- Linguistic Analysis:** Demonstrated that retaining stopwords improves Transformer-based model performance, challenging standard NLP preprocessing conventions.

SKILLS

Development

- Frontend** - React, Redux, Next.js, TypeScript, HTML, CSS
- Backend** - Node.js, C#, Java Spring, GoLang
- Databases** - PostgreSQL, MongoDB, MySQL, Redis
- Infrastructure & DevOps** - Docker, AWS, Git, CI/CD, TDD, RabbitMQ, Kafka

General

- Languages** - Portuguese (C2), English (C1), German (A1)
- Soft Skills** - Problem-solving, Critical Thinking, Agile Methodologies, Effective Communication, Team Leadership

EXPERIENCE

Ticketbro

Software Engineer (Freelance) Munich, Germany (Remote) 05/2025 - Present

- Contributed to the development of a SaaS platform for online service booking, translating complex business requirements into scalable and robust features.
- Developing serverless backend solutions using Node.js and AWS Lambda, integrated with DynamoDB to process real-time reservations with low latency.
- Built and maintained RESTful APIs via AWS API Gateway, ensuring reliability and scalability as the user base grew.
- Developed responsive and high-performance frontend interfaces using Next.js, React, and TypeScript for both administrative dashboards and end-user purchasing flows.
- Collaborated closely with product and design teams in an early-stage startup environment, promoting cross-functional alignment and rapid iteration.

Usebens Insurance

São José do Rio Preto, Brazil

Web Developer

03/2024 - 11/2024

- Developed responsive and scalable web applications using Next.js and TypeScript.
- Built RESTful APIs and integrated third-party services to optimize insurance systems.
- Refactored legacy code in Java 8 and Angular, enhancing overall system performance.
- Employed Agile (SCRUM) methodologies to ensure efficient project delivery.
- Developed reusable components in C#, contributing to improved code maintainability.

ECCJR

São Paulo, Brazil

President of Projects

01/2023 - 11/2025

- Led a multidisciplinary team in delivering real-world software solutions for diverse clients.
- Designed and implemented single-page applications using React, Redux, Next.js, and Gatsby.
- Built robust backend services with Node.js, C#, and Java Spring, ensuring scalability and performance.
- Mentored university students in modern web development practices and Agile methodologies.
- Oversaw complete project lifecycles—from requirement gathering to deployment—delivering high-quality solutions.

ACADEMIC & EXTRA-CURRICULAR INVOLVEMENTS

President of ECCJR — Managed software development projects, coordinated client communications, and mentored junior developers. *UNESP, 2023–2025*

Winner — NASA Space Apps Challenge (Regional Stage) — Developing solution for exoplanets finds with A.I. *2025*

3x Place Winner — Morro markers — Our team developed a solution featuring dynamic pricing, powered by real-time variable analysis. *2025*

Winner — NASA Space Apps Challenge (Regional Stage) — Developed an educational solution using VR and augmented reality. *2024*

Marketing Committee — SEMAC — Led promotional strategies, social media outreach, and event branding. *UNESP, 2024*

React Workshop Instructor — SEMAC — Conducted hands-on workshops on React, guiding students through project development. *UNESP, 2024*

Support Committee — SEMAC — Provided logistical support for successful event execution. *UNESP, 2023*

Content Committee — SEMAC — Assisted in organizing academic lectures and workshops. *UNESP, 2022*
